Attorney Docket No.: 00P9128US

predetermined frame length having a duration about ten milliseconds.

- 7. (Previously Presented) A system in accordance with claim 6, said slots comprising transmit and receive slots each having a duration of 833 microseconds.
- 8. (Original) A system in accordance with claim 7, further comprising limiting a use of a particular carrier to less than 400 milliseconds every thirty seconds.
- 9. (Currently Amended) A device for <u>use in</u> frequency selection in a frequency hopping cordless telephone employing a predetermined frame length, comprising:
- a slot monitoring module adapted to identify active slots in a frame; and a frequency selection module adapted to determine a duration of carrier usage based on durations of numbers of said active slots.
- 10. (Previously Presented) A device in accordance with claim 9, said predetermined frame length having a duration about ten milliseconds.
- 11. (Previously Presented) A device in accordance with claim 10, sald slots comprising transmit and receive slots each having a duration of 833 microseconds.
- 12. (Currently Amended) A method for <u>use in</u> frequency selection in a frequency hopping cordless telephone system employing a predetermined frame length, comprising:

identifying a number of active slots in a frame; and determining a duration of carrier usage based on total durations of said number of active slots.
